

Fabrication and Optimization of Semitransparent Perovskite Solar Cells for Upconversion Integration

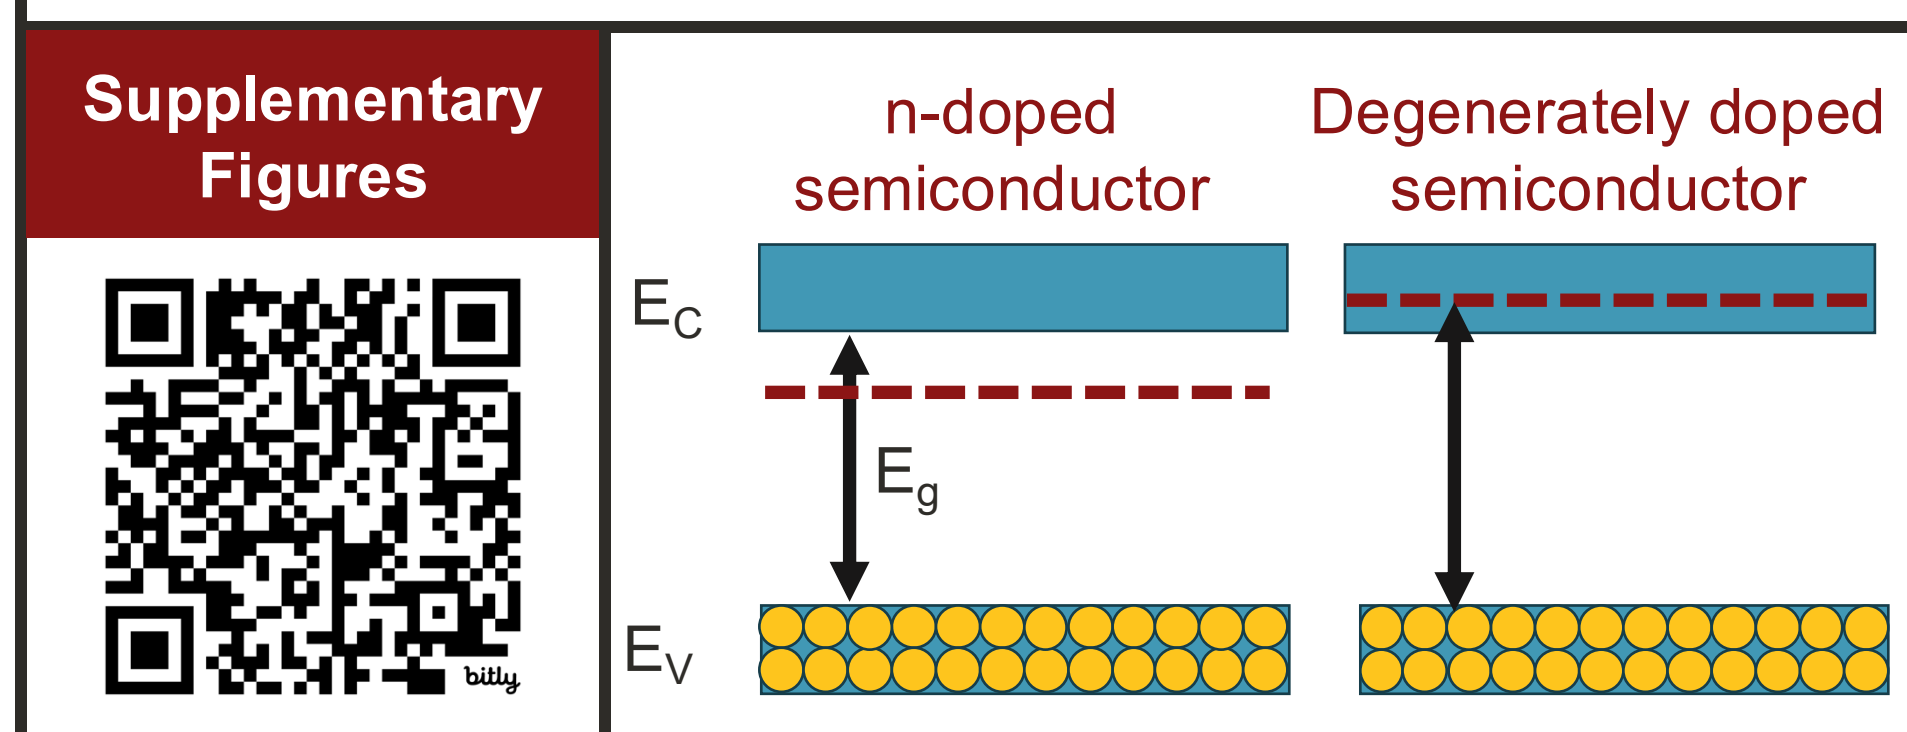

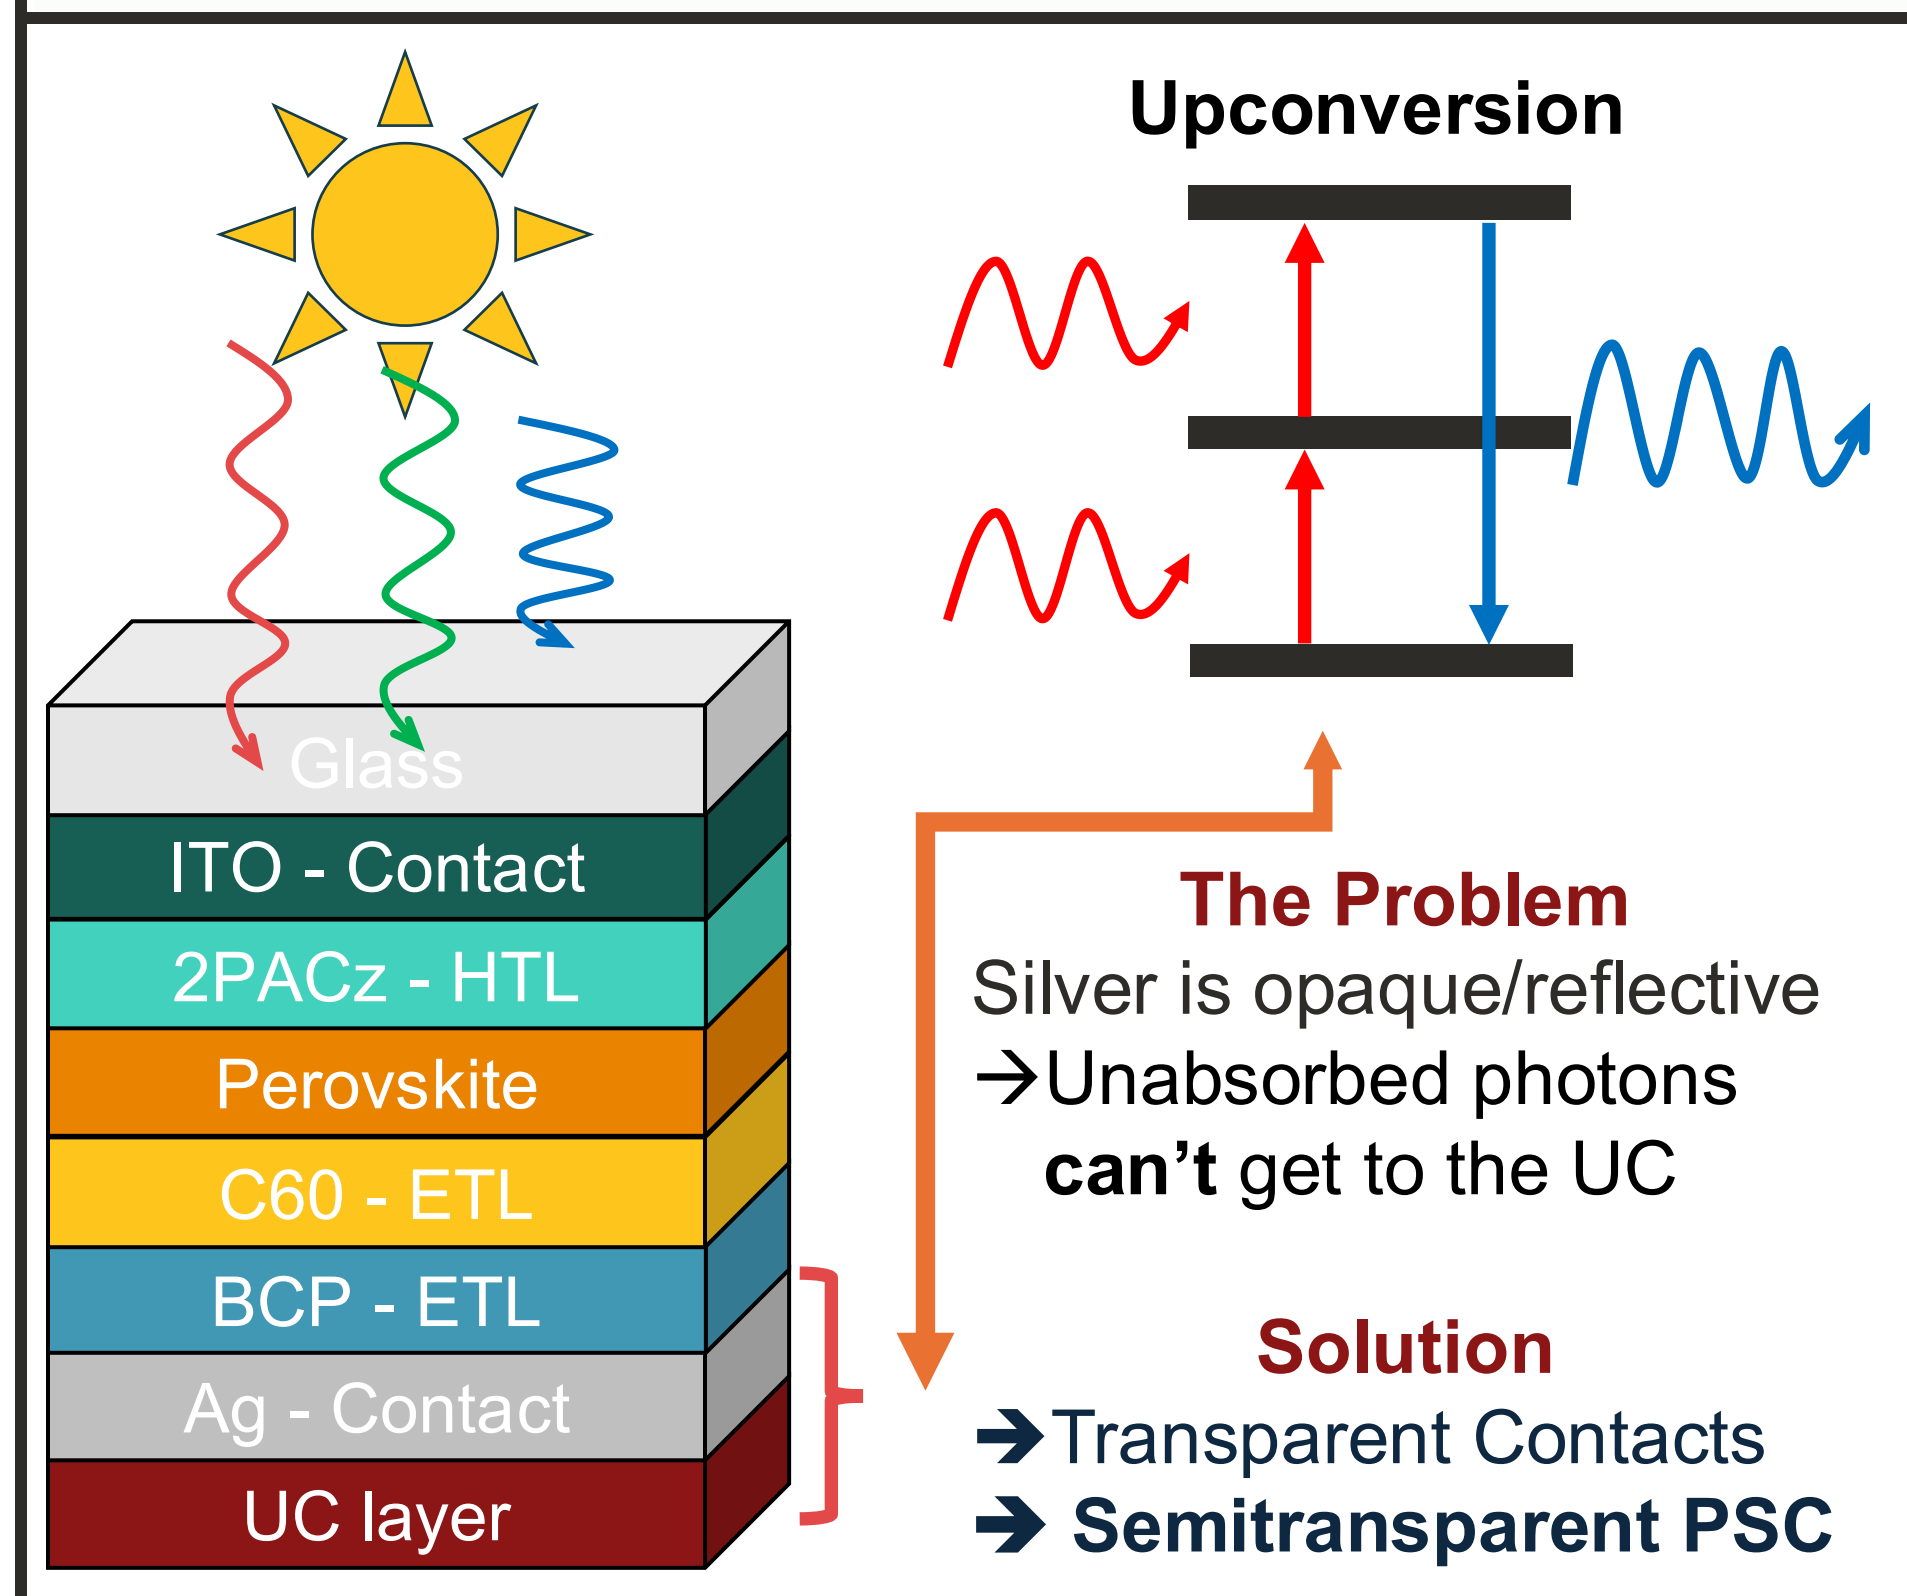

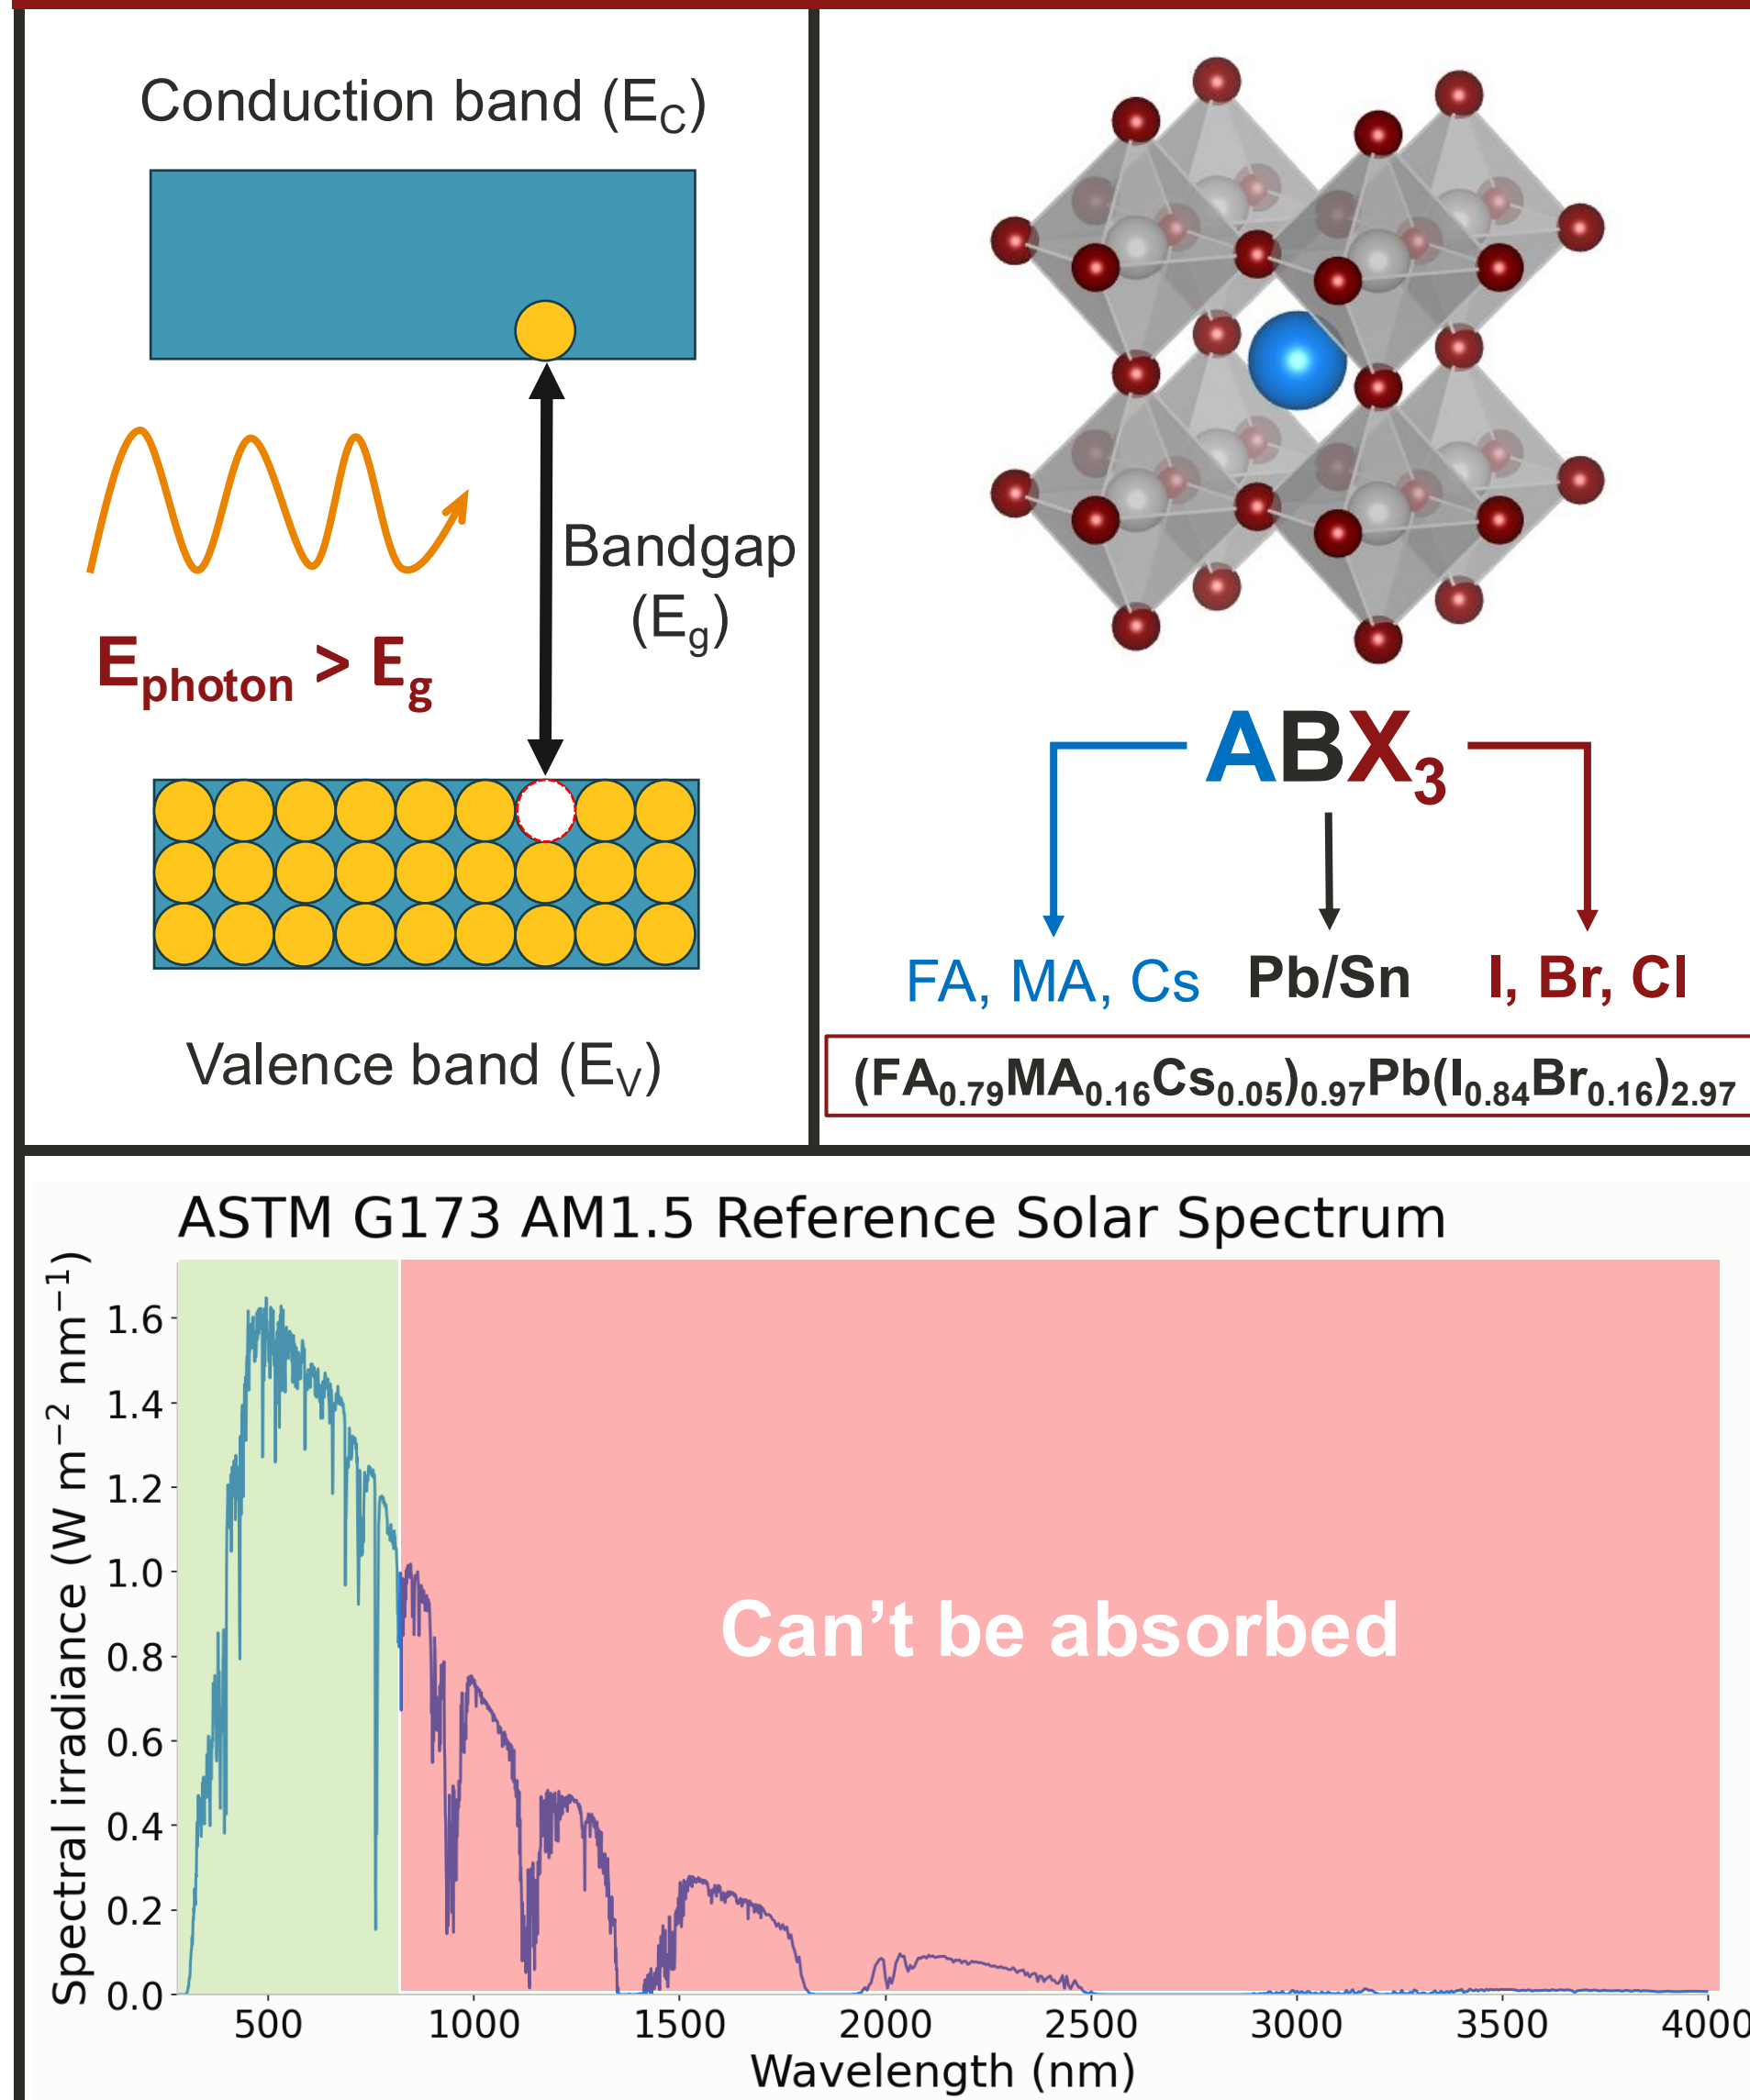

Tung D. Nguyen^{1,2}, Tyler K. Colenbrander¹, Daniel N. Congreve¹

¹Department of Electrical Engineering, Stanford University

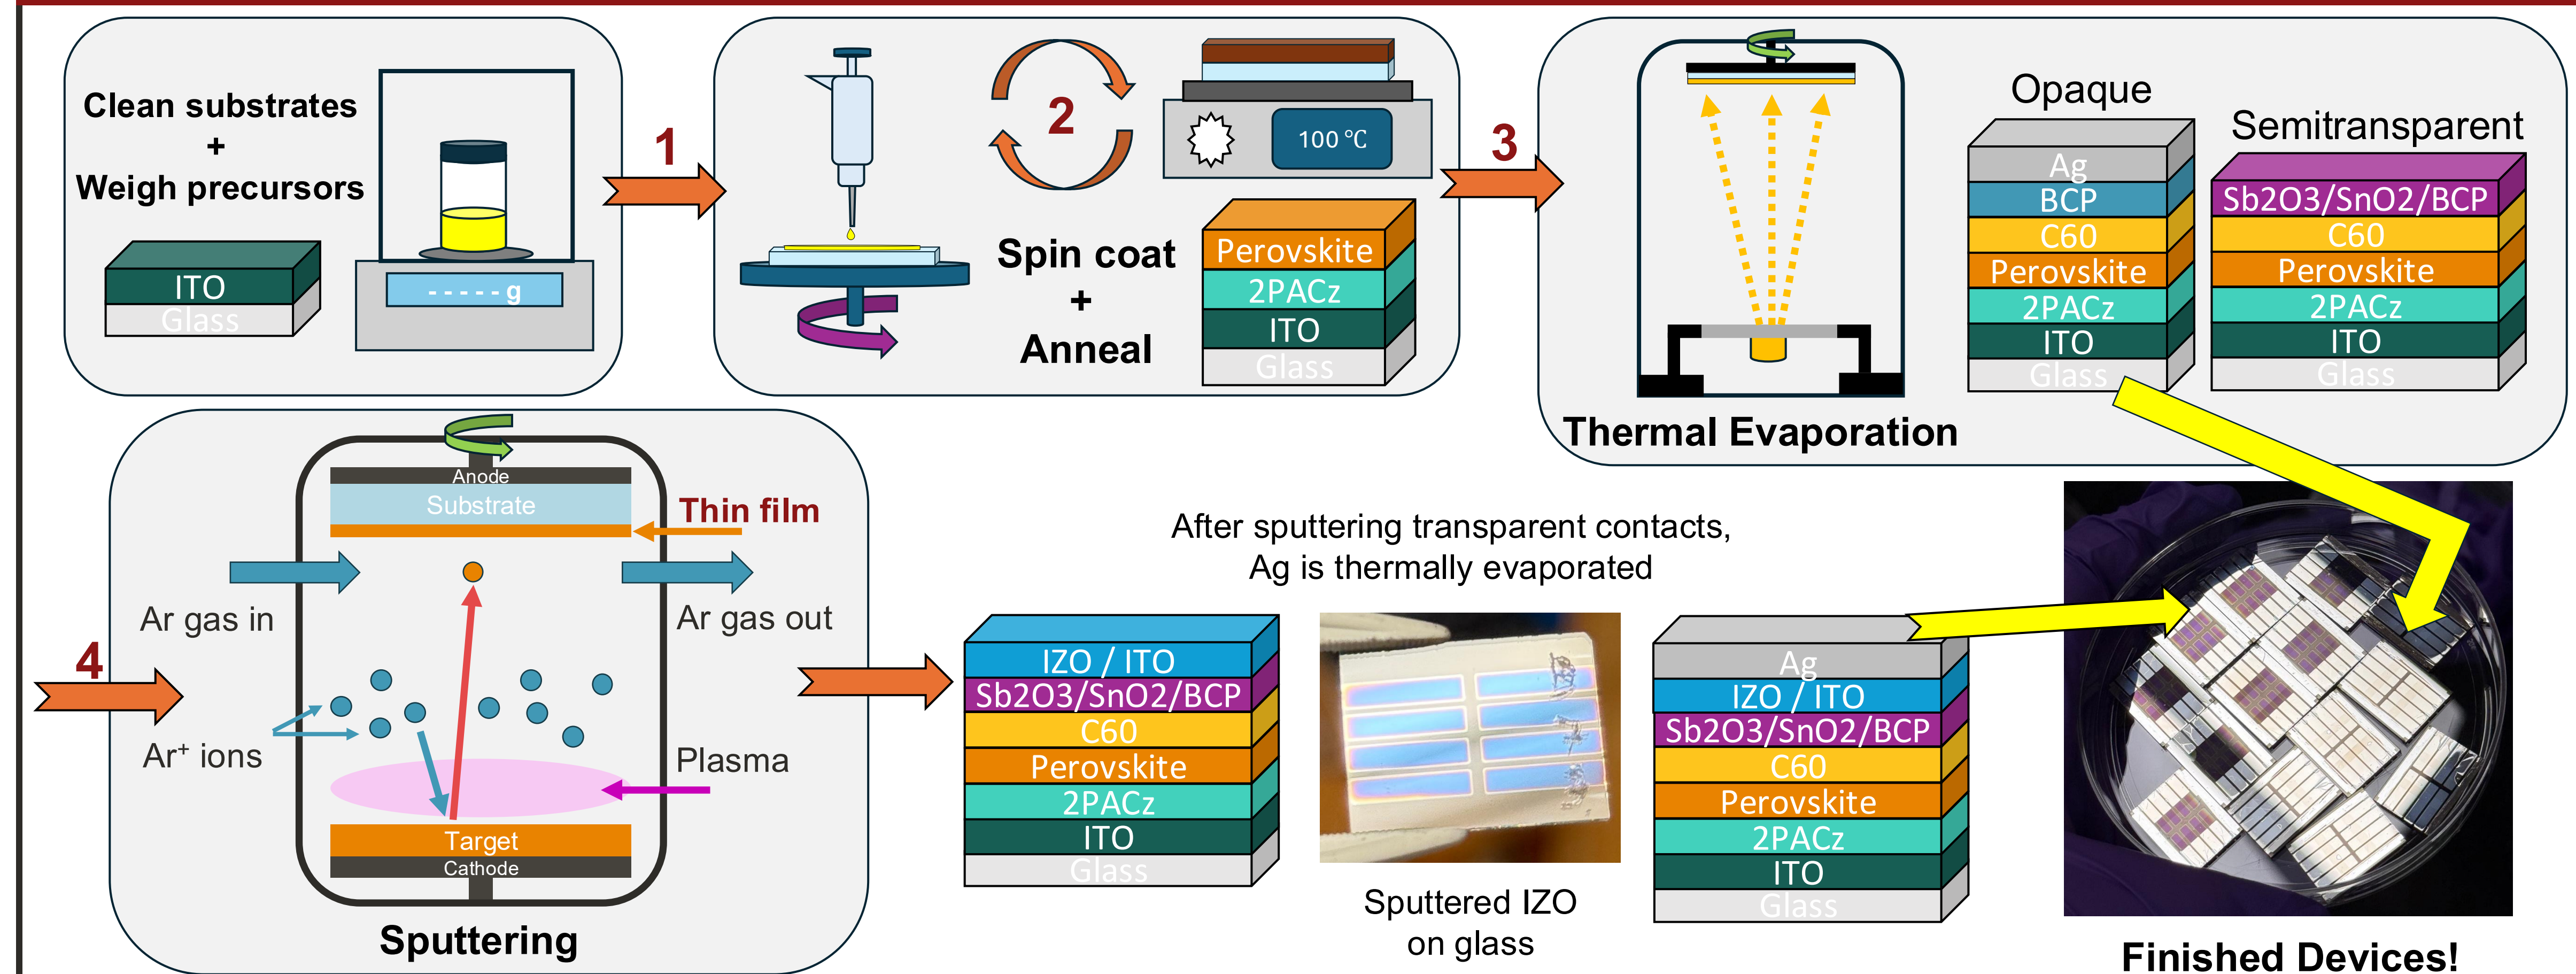

²Department of Materials Science and Engineering, Stanford University

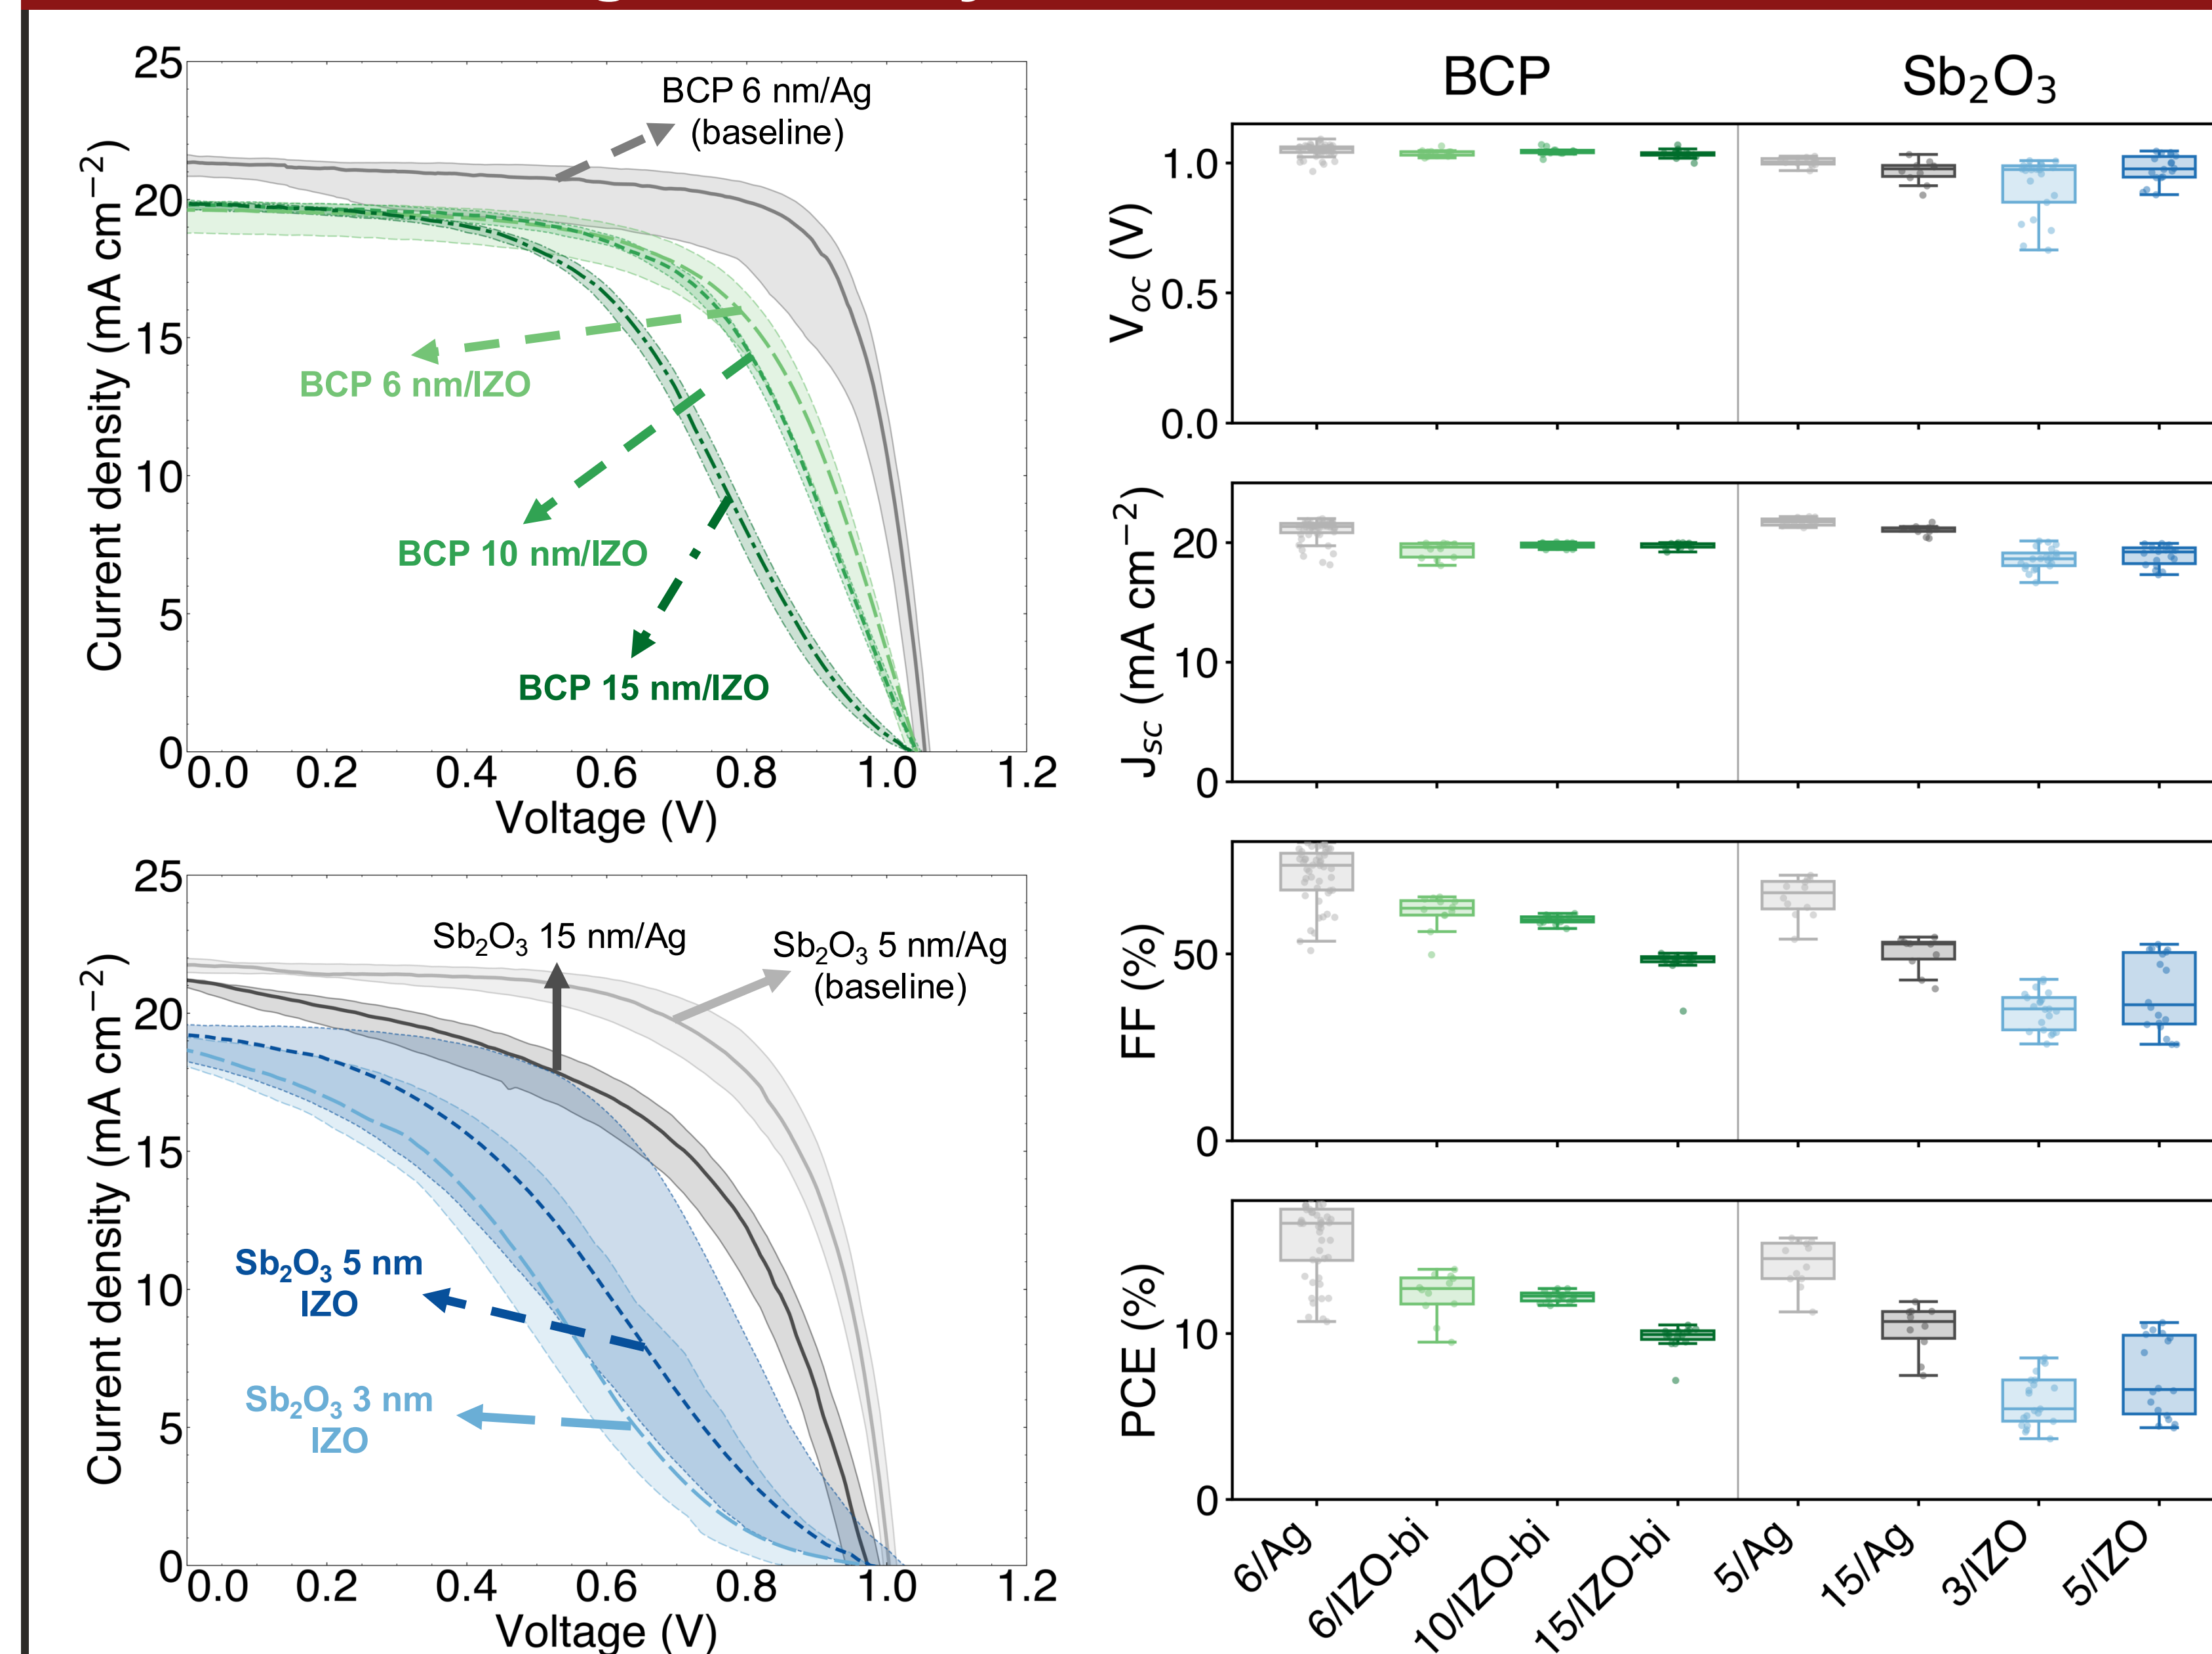

Background and Motivation

Device Fabrication

Testing Buffer Layer Materials and Thicknesses

Future Work

- Optimize the buffer layer
- Optimize the IZO sputtering recipe
- Try soft sputter with Sb₂O₃ / SnO₂
- Try different transport layers
- Integrate the upconversion system with the semitransparent device
- Ellipsometry and optical modeling of layers

Acknowledgements

I would like to thank my mentor, Tyler Colenbrander, and my advisor, Prof. Dan Congreve, for their continued support, mentorship, and guidance.

I would also like to extend my gratitude to the members of the Congreve Lab, to the staff of the Stanford Nanofabrication Facility, the Soft Materials Facility, and the EE REU Program for the training, assistance and resources that made this work possible.
